### COMMENTS TO AUTHORS

Well written review. I have some considerations: Page 3, last paragraph: 2 cm excision margin. Would be interesting to discuss as well the microscopically margin. Page 6, first paragraph, last sentence. It is not clear for me if the authors advocate sentinel lymph node testing or full lymph node dissection. Page 6, second paragraph (adjuvant therapies). It would be interesting to inform the readership about GROINSS-V II trial.

### COMMENTS TO AUTHORS

This is a nice review article. Paget's disease of the vulva is classified into intraepithelial and invasive. The authors should describe their recurrence and prognosis referring to a recent article (Nomura H et al. J Low Genit Tract Dis 2015; 19(2): 145).

### COMMENTS TO AUTHORS

- Paragraph 2, Introduction section (A systematic literature search was performed....) needs to be put under a new heading as Methods. - In the same paragraph (para 2, page 1) numbers should not be used at the beginning of the sentence. Authors, please replace "54 papers were identified ..." with "Fifty-four papers were identified ...." - Page 4, para 2 (after Figure 1): The paragraph starts with "Hacker et al, 2000 investigated the correlation between depth...". This reference is not listed in the End of Text Reference List. Please either add to the list or remove from the text - The section "Post-operative complications and psychosexual consequences" barely discusses sexual problems of this group of patients. - Great amount of information has been provided in the paper without referring to a reliable resource. ie. page 7, the entire sections "Post-operative complications and psychosexual consequences" and "Paget's disease of vulva". - Page 8, para 1 - "Despite these promising results, HPV is the main aetiological causes ..... as outlines in this review, can be circumvented". This long paragraph needs to be referenced appropriately. - Although the title gives the reader the idea of reading the results of current and latest research, the authors have used limited number of research on the topic. They have also used several papers that are older than 15 years

(reference 1, 2, 3, 8, 10, 14, 19). - There is a need to another section at the end of the paper, before Conclusion, that highlights the shortcomings of the currents practice and the need for future research in this field.
