COMMENTS TO AUTHORS

Dear Authors, The presented review article is focused on central serous chorioretinopathy (CSCR), mainly addressing the value of new imaging and functional diagnostic methods, and the applicability of several treatment modalities. The manuscript is concise and well structured. The language needs minor revision. I just have 2 remarks: 1) It might be appreciated by readers if the discussed diagnostic methods are illustrated with figures. 2) In the past years some evidence arises for the relation of herpes zoster virus (HZV) and CSCR, and good results after antiviral (Acyclovir) therapy have been published. If the authors have any view or comment on this topic, they may add it in the manuscript.
