COMMENTS TO AUTHORS

This is a comprehensive review that includes past and current knowledge in the field. There are good descriptions of the broad spectrum of symptoms according to the cranial nerve involved. Some minor revisions are suggested. There are many repetitions about the incidence of cranial neuropathies in sarcoidosis throughout the text. I believe that a comprehensible table, like Table 2 in the text, is enough. Although the review is scientifically substantiated by up-dated references, there are also a lot of outdated references. In the subsection on "The pathogenesis of neurosarcoidosis", the reference used to document the pathogenesis of the disease is wrong (4th arrow, reference 22). A brief reference to the current and emerging therapeutic strategies in neurosarcoidosis is also needed. The abbreviation of central nervous system in the subsection of facial neuropathy has already been given earlier.

COMMENTS TO AUTHORS

I have read with great interest this manuscript "Cranial Neuropathies in Sarcoidosis". I have the following concern: The manuscript written in a textbook style! I could not follow it easily. I would suggest rewriting it in the traditional style of case report/ series. (Background, case history, discussion) There is clear redundancy in the text; too long abstract and discussion. It sounds that figure 1 is not from the author's patients! Seventy three references for such report are too many
