COMMENTS TO AUTHORS

This is a nice review on the topic. The authors have left the track changes on and this can be removed. It would be interesting to compare the complications of cataract and IOP increase or glaucoma between triamcinolone, Retisert, Iluvien and Ozurdex. The authors can do this in a table. A reference which can help them is: Lambiase et al. An update on intravitreal implants in use for eye disorders. Drugs of Today 2014, 50(3):239-249. A short discussion on non cystoid macular edema following cataract surgery would also be appropriate as steroidal implants are currently being used. The authors should specify the conditions which limit systemic corticosteroid use (e in children).

COMMENTS TO AUTHORS

Manuscript number: 17242 (World Journal of Ophthalmology) Title: Intravitreal drug use for the treatment of posterior uveitis This is a short review of treatment options for uveitis, with focus on 'Intravitreal' drug administration. The authors have made good effort to compile an up to date review of drug therapy for this condition. My knowledge is that uveitis is one major complication of Behcet's disease, which is prevalent in the countries along the ancient Silk Road. This article should generate significant interest amongst ophthalmologist globally. The manuscript should benefit from editing to improve the quality of the English language. There are misuses of the word "the" in various places. For example.....still the corticosteroids. "the" before corticosteroids is inappropriate. Minor corrections by using better words are needed throughout the text. Your manuscript title looks better as seen below Intravitreal drug administration for the treatment of posterior uveitis Apart from these minor points, I have no hard words for the authors.

COMMENTS TO AUTHORS

A more suitable title would be: Intravitreal drug administration for the treatment of Noninfectious Uveitis There needs to be a table summary of the literature review so audience can refer to easily Please send it to American Journal Experts for language improvements
