COMMENTS TO AUTHORS

The systematic literature review by Kanzara and colleagues provides a clinico-anatomical analysis of the tympanic nerve. The topic is important in view of its anatomical variability, close association to several organs and the several important surgical implications for the medical practice. Furthermore, the manuscript provides an interesting historical overview on the discovery and description of this important nerve. The study is novel and relevant to doctors and researchers from various fields. The paper is written in good scientific English, the reference list is adequate. The study design is sound and the presented findings and their discussion as well as the conclusions are reliable. A more detailed specification is needed regarding the sources of the Figures (e.g. not known who is Dr Fukushima - please provide affiliation).
