COMMENTS TO AUTHORS

Authors review the potential role of FDG-PET in the clinical use of EGFR-TKIs for NSCLC. Most of the studies are from the early stage after EGFR inhibitor treatment for NSCLC, author should summarize some data from the later stage after EGFR-TKi initiation for a few months or longer. Minor comments: 1)page 4, Several lines of evidence....., page 5, several studies....., page 7, Previous studies....., should show some references; 2)Figure 1 no legend.
