## COMMENTS TO AUTHORS

This is a literature review on the use of laser in periodontal therapy. The coverage of literature appears to be adequate, but the organization of the text needs improvement. The discussion jumps between advantages and disadvantages of using laser throughout the article, with lack of focus and therefore this article is very difficult to read. I suggest the authors to re-organize the manuscript by dividing it into different sections such as (1) studies that support (2) studies do not support, etc. Finally, a systematic review would carries much greater weight in the literature. Authors shall explain why this has not been done instead of an ordinary literature review.
