		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

This paper reviewed current studies on the relation between sleep and epilepsy, and the authors concluded that "controlling epilepsy will improve the sleeping quality while consolidating sleep will make it easier to control the seizures. Meticulous attention to sleep in epileptic children has important implications for diagnosis, seizure control, and quality of life". In general, the topic is quite interesting and worth to be considered for publication. The following revisions may need to be done 1) The authors may need to carefully check grammars and make all the tenses consistent throughout the text. 2) Full name should be given for the first appearance of the abbreviations such as ACTH, IGF etc. 3) Page number should be added in the text
