## COMMENTS TO AUTHORS

Congratulations for this updated review concerning the use of corticosteroids in Kawasaki disease. It is clear and well written. Major points: A recent paper published in Ped Int entitled "Verification of risk scores to predict intravenous immunoglobulin resistance in incomplete Kawasaki disease" by Kanamitsu et al, provides new insights in incomplete KD. Their results may be discussed in this review, particularly in the topic "The use of corticosteroids in patients unresponsive to IVIG treatment" Minor points: Correct ref 43 Review table 3 " $\beta$ -propiolactone" (ref 64 & 65) should appear "B-propiolactone" as the IVIG compound involved in different outcomes.

## COMMENTS TO AUTHORS

The whole issue is relevant and touches an important question. However, the whole review is not well focused and requires English improvement. Abstract: Needs to be shorter. Better focused. Borders between the 3 options are not clear. Last paragraph is confused. Introduction: Should explain better what are the exact questions. The given information on all different options is not clear and in many parts is similar to the others. Discussion: Is a repetition to what authors cite and describe in introduction. The whole review should be restyled
