COMMENTS TO AUTHORS

The author reports a pediatric patient with inflammatory fibroid polyps (IFPs) and a systematic review of IFPs in children. The paper is well-written and has comprehensive information regarding IFPs. Some points should be revised. Abstract 1. The term of "demolitive surgery" is unusual. I think it is better to describe "invasive surgery" or "massive resection". Results 2. page 3, line 20: What is "enethorrhagy"? enteropathy? Discussion 3. page 4, line 27: The reference no. 8 is cited here. It is not right citation. Please check it. 4. page 5, line 13: What is "FNA"? Please provide a full spelling of an abbreviation when it is first used. 5. page 5, line 11: The reference no. 8 is not right to cite here. 6. page 5-6: A perivascular onion skinning is a prominent feature of IFPs. Please describe this in the histopathology section. 7. An excellent review paper regarding IFPs in adulthood has recently been published (Liu TC, et al. Am J Surg Pathol. 2013 Apr;37(4):586-92). It is better to cite this paper in the discussion.

COMMENTS TO AUTHORS

The manuscript is well written and very interesting. A more extensive discussion about the treatment (conservative, or endoscopic or surgery) of the duodenal polyps can be useful.
