COMMENTS TO AUTHORS

The article is well written and interesting. Please, state more clearly the core of your report: do not worry for thrombocytosis in small children with bronchiolitis? There was some previous report, or some clinical practice which address this as a warning clue with some type of concern? Pathophysiology, if any, is vaguely considered. Some proposed workup lacks Therapeutic strategy should be justified, and can be the target of criticisms if the context - limited resources? Others? - is not detailed. We need more clarity in the information we want to convey to readers, so that a short conclusion dealing with any kind of envisaged impact should be provided. Please, The individual participation of the Authors to the research should be better displayed, even anonymously Please, check the line Influenza 6 (46) 7 (2.6) 0.09 Of table 1
