statementsConflicts-of-Interest: [☐] Yes [☒] No**SPECIFIC COMMENTS TO AUTHORS**

This type of presentation is highly uncommon and deserves a mention. The Manuscript can be enhanced more with additions to discussion in terms of literature review. My inputs are: 1. Doppler USG- comment on vascularity ? 2. Any scrotal skin entrapment by zip tie, will immediately cause pain or within few hours. Why there is a delay of 3 days? Any child abuse ruled out esp in child in intellect disability ? Mention developmental milestones. Though the authors mention 'Child abuse' however seem to miss the complete work up regarding the same. 3. "a scrotal entrapment by nylon zip-tie was diagnosed 8 days" This is highly inconspicuous that marks were missed in first presentation or any unusual finding noted at same site in previous presentation. 4. This is self locking wire fastener (zip tie). Is it abuse or accidentally put ? Since the first presentation is similar, is it perversion of any kind; influenced by TV, internet or external factors ? 5. The images are small; provide better resolution large images. 6. Discussion needs to be worked out in terms of literature review. 7. Conclusion is not giving a characteristic take home message. May modify.

SPECIFIC COMMENTS TO AUTHORS

The Authors have presented a very important and impressive case. English grammar and style need an accurate review. There are many grammatical errors in the text. These should be corrected. The paper can be published after these revisions. Best regards,
