COMMENTS TO AUTHORS

In the recent paper the author aimed to review current literatures about the association between vascular diseases and erectile dysfunction and discuss the need for a multidisciplinary approach for the management of erectile dysfunction. This reviewer thinks that the present paper is well organized and summarize the association between potential cardiovascular pathologies and erectile dysfunction. However the topic is widely discussed in the literature and the recent review adds nothing new to the present literature.

COMMENTS TO AUTHORS

This is a review article about the association of ED and vascular problems. The article is well written and I enjoyed reading every part of it. However the paragraphs of anatomy and physiology of erection are weak and of no significant value; I prefer to delete them.

COMMENTS TO AUTHORS

This is an interesting review of the correlation of erectile dysfunction with cardiovascular disorders. Comments: - The epidemiology of ED in patients with vascular risk factors should be described in greater details. - It would be helpful to clarify that specific cases of ED correlate with vascular disorders and not all. As example, vasculogenic ED closely correlates with cardiovascular problems. Neurogenic ED and ED resulting from pelvic trauma, surgical procedures, and apoptosis have nothing to do with vascular problems. - Tables 1 and 2 may not be needed. Information from these tables could be described within the text. - In table 1, atherosclerosis and peripheral vascular disorder are vascular diseases and not risk factors of vascular disease. History of heart disease indicates vascular disease in the past and may not necessarily be a risk factor for impending vascular disease. Overall, this is a very interesting and well-written review.

COMMENTS TO AUTHORS

1. The title is grammatically poor: Why is there a need of interdisciplinary approach to assess erectile dysfunction? ? This should be changed e.g. Why is there a need for an interdisciplinary approach to assess erectile dysfunction? ? 2. Abstract para 2 " This article endeavours to review current literatures on the issue" change to "This article endeavours to review the current literature". 3. Introduction, para 1, change the word influenced " It is estimated that more than ten million men are influenced by ED throughout the world [2]. 4. Introduction, para 2; The risk of vascular diseases in men increases with the increase of age, and it even becomes worse in men suffering Erectile dysfunction [5]. Change to, The risk of vascular diseases in men increases with age, and it even becomes worse in men suffering with ED [5]. 5. Mechanism of erection and factors inducing erectile dysfunction, para 2; change glance of penis. Although there are numerous small and large veins serving the glans penis, the deep dorsal vein provides the main venous drainage of the glance of penis (Figure 3) [15]. 6. Throughout the text erectile dysfunction and coronary artery disease is not consistently abbreviated 7. Conclusion, para 1 needs rewording; "this disorder is still under-diagnosed because many men would prefer to keep their having ED a secret".
