COMMENTS TO AUTHORS

The manuscript provides interesting and complete data about the most current developments in the therapeutic approaches in Chlamydia trachomatis infections in sexually active young men. The manuscript is well written and should be considered for publication in World Journal of Clinical Urology.

COMMENTS TO AUTHORS

Major comments: 1) The manuscript will need to be extensively reviewed and edited by a native English speaker, preferably someone experienced in editing of scientific papers. 2) I think the authors should put more effort into summarizing, analysing and discussing the controversies existing in our current knowledge. Outside of clinical trials/research, is Il-8 monitoring accepted and/or recommended by major scientific societies/guidelines? Minor comments: 1) on the title of the manuscript, "challengin" should be changed to "challenging" (typo)
