**COMMENTS TO AUTHORS**

1. Abstract needs to be restructured. It should be more focused. The aim of the review article must be stated with clarity in last couple of lines. 2. The introduction should be longer and show a broader overview of the subject. While introducing the subject, the authors must provide current demographic details including appropriate references (latest). 3. Please include a state of the art know-how of different forms of infertility and treatment requirements. This section can also be presented in form of a table citing adequate references. With this inclusion, the review article will find a clinical-connect which is missing in the present form. 4. For each segment discussed under the heading "Genetic reasons of male infertility", the authors must provide update references. 5. Unfortunately, this review does not have a conclusion segment. It must be included. The authors must provide a holistic picture and their own views in this section. Future perspectives must also be included. This will help to significantly elevate the impact of the article.
