COMMENTS TO AUTHORS

The paper is interesting, well written and concise. I would only suggest to the Authors to extend description and results of TURIs, especially in regard to the development of urethral/bladder neck stricture. For example the paper from Komura et al, published in BJU Int is a randomized trial comparing mTURP to TURIS. The main finding is an higher incidence of stricture in the TURIS group which is in contrast with the results, for example, of the paper published by Fagerström et al in the J Endourol in 2011
