COMMENTS TO AUTHORS

I would like to congratulate with the authors for this paper. The topic is of great interest and the review of literature is well done. Some comments: 1- I don't completely understand the meaning of the first sentence of third paragraph (3 - Mechanism of action of Hyperthermia): why is necessary explain the role of the "hypothalamus regulatory center body temperature"? As far as I know, this mechanism is not involved in the effects of intravesical chemotherapy. 2-Paragraph 5 Chemohyperthermia (CHT): we should consider there is a third type of treatment: "salvage intravesical CHT", after BCG failure (for example A. Witjes et al. World J Urol (2009) 27: 319)

COMMENTS TO AUTHORS

Summary: The authors present an in-depth review of concurrent hyperthermia and intravesical therapies for non muscle invasive bladder cancers. This is a valuable contribution to the literature as a synopsis of the current literature on the subject. **Overall:** Please ensure the entire manuscript is edited for proper English spelling, grammar, syntax, and diction. **Methods:** Please describe systematic approach to literature survey performed for the background support upon which this review is written.
