COMMENTS TO AUTHORS

The manuscript is reasonably detailed. However, the text can be shorted significantly and replaced by summary tables and figures as follows. Summary tables summarizing the emergent methods with the appropriate literature and significant shortening of the text. Figures showing 1) Pathogenesis of disease. 2) Comparison of the methods and summary of key points/ future directions. The text can be better organized.

COMMENTS TO AUTHORS

Good job, my suggest is to make a table in which could be summarize the features (identified as clinical indicators by the Authors in their studies) and what these features predict. No other remarks.
