### COMMENTS TO AUTHORS

This is an interesting review of the available literature on categorization and treatment of thrombocytosis due to polycythemia vera, prefibrotic myeloproliferative neoplasms and essential thrombocytosis. The differences in treatment and outcomes based on national recommendations identify the need for international collaboration in diagnosing and treatment of these conditions. The manuscript has appeal to hematology specialists; definitive treatment recommendations for non-specialist who may be called upon to treat these patients during emergencies would be a useful addition.

### COMMENTS TO AUTHORS

Dear author, I think that your paper is suitable for publication but it is needed a minor revision. 1. L8, P4 What do you mean with My co-worker? 2. L2 from the end, P% only the 60 years? 3. L12-13, P6, What do you mean? 4. L9 from the end, P7, Italian study? 5. The tables and figures reflect the major discussion of your review paper but it is not in the same format. 6. The table on page 5 is your results? 7. The discussion is not well organized. Please rewrite the first paragraph of discussion with the main idea of the review.
