COMMENTS TO AUTHORS

This is a very interesting review that extends our knowledge on the renal venous hypertension. In this paper, the authors reviewed pathogenesis, diagnostics and clinical manifestations of renal venous hypertension. Literature review is well cited and comprehensive. This contribution will certainly prove a useful reading for the readers of the World Journal of Hypertension. Minor comment: A more detailed discussion of treatment options and recommendations for the management of renal venous hypertension could be added.

COMMENTS TO AUTHORS

The present review discusses normal and pathological developmental aspects of renocaval venous segment and related circulatory disorders, summarizes congenital and acquired changes in left renal vein and their impact on development of renal venous hypertension. Overall, the review is well-written and the topic is important. If possible, it would be better to add a scheme to describe the development of renal venous hypertension.
