<input type="checkbox"/> Grade E (Poor)	<input type="checkbox"/> Grade D: rejected	<input type="checkbox"/> Existed	<input type="checkbox"/> Minor revision
		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

The paper by Mitra et al. describes the main approaches available to overcome the physiological barriers and limitations existing in drug delivery of ophthalmic agents. An overview of the modern methods available are described including those giving a direct access to the target sites and those involving the development of novel drug delivery systems providing better permeability and controlled release of the drug at the target site.
