#### **SPECIFIC COMMENTS TO AUTHORS**

This paper not only analyzes the factors that affect abortion, but also analyzes the impact of abortion on women's mental health. The research topic is of great academic value. The paper as a whole presents the conclusions of different studies in the form of a review, and points out the shortcomings of different studies. However, the disadvantage of the paper is that there are very few opinions of the author presented in the paper, so that the academic value of the entire paper is more reflected in the review of existing research, and it does not show the author's point of view and what should be done in the field in the future. It is suggested that the author should add another paragraph based on the existing literature review, describing the author's views and the direction of future research in more detail.

#### **SPECIFIC COMMENTS TO AUTHORS**

The authors have extensively discussed various demographic factors and psychopathological factors that play a role in the women's decision-making regarding therapeutic termination of pregnancy. The review covers extensive amount of literature including international data and how the factors vary remarkably across various countries and regions. The findings confirm that past history of psychopathology impacts the future outcomes following therapeutic termination of pregnancy.
