COMMENTS TO AUTHORS

This study compared the outcomes in anorexia nervosa in different treatment settings, and found a preliminary support for the treatment in less restrictive settings. However, more researches are needed. This article is clearly. Minor revision: 1.In abstract, only search strategy was included in the materials and methods section. No analysing methods were included. 2.The full names of some abbreviation were not given at their first appearance. Should be correct. 3.How many tables are there in the article? Only one table can be read in the text. Please check.

COMMENTS TO AUTHORS

This paper addresses the problem many physicians working with ED patients face and that is whether the patient should be followed as an inpatient vs outpatient. The strengths of the current manuscript include that it is well written, easy to follow with very interesting findings.
