SPECIFIC COMMENTS TO AUTHORS

An interesting review on the topic of pregnancy and liver transplantation. To increase its value, I would recommend a more detailed analysis regarding etiology of liver disease and possible complications during pregnancy. The authors have stated about the effect of alcohol on fertility, but for example autoimmune disease and impact on recrudescence or rejection would be important to tailor the immunosuppression regimen. Furthermore a comparison with the outcomes of pregnancy in solid organ transplantation in general would help the reader to understand what is peculiar of liver patients and what is common instead to transplantation and immunosuppression. Finally, what is the authors' approach in the case of induced delivery? How would they manage pregnant woman with acute liver failure?

SPECIFIC COMMENTS TO AUTHORS

This is very impressive and important review in the field of Ltx however I would like to add some points; 1- the authors mentioned that first post partum ltx was reported in 1990 please add the etiology of ltx in this case 2- in pregnancy after ltx section :the method of contraception is a matter of controversy in women after ltx please add the pro and cons of the different methods of contraception . The authors mentioned oral contraceptives and transdermal patches however there are some withdrawals on these methods . 3- in outcomes of pregnancy after ltx section: The authors mentioned the rate of rejection varies between 0-20% More details on management and outcome of rejection in such cases such as prognosis , adding MMF after labor..... 4- the authors didn't come to the issue of breast feeding which is important aspect in this context
