COMMENTS TO AUTHORS

In the review article of Salvadori M. and Bertoni E. (What's' new in clinical solid organ transplantation by 2013) the authors aimed to summarize the latest insights in solid organ transplantation. The review is very extensive, critically covers all the crucial aspects of the topic and uses up-to-date references. The use of English language is also excellent. I definitely suggest to accept if for publication in WJT.

COMMENTS TO AUTHORS

This review is a very usefully, complex conclusion and recommendation in field of solid organ transplantation. This could be the "Bible" of doctors involved in transplantation. My suggestion is that this Author should be invited yearly to renew the crosssection of this field.

COMMENTS TO AUTHORS

In this review study, the authors summerized the main progression in the field of organ transplantation during last year, including expanded criteria donors, organ allocations, organ preservation, antibody mediated rejection, new Banff criteria, ischemia reperfusion injury, new immunosuppressants, new biomarkers for acute rejection, et al. The manuscript gives some useful information to the readers.
