COMMENTS TO AUTHORS

Psychological stress and psychiatric aspects of kidney transplantation. The role of a multidisciplinary team for a better therapeutic adherence The transplant experience can configure a psychosomatic crisis that requires the patient to mobilize all its bio-psycho-social resources in the process of adaptation to the new foreign organ which may result in an alteration of self-representation and identity, with possible psychopathology repercussions The paper is very interesting and it's a good idea However it has important methodological errors. It is very important to review the methodology in this paper The summary should be in narrative form The manuscript is difficult to understand The Introduction briefly outlines the aim of the paper It should add criteria inclusion and exclusion References

COMMENTS TO AUTHORS

Article "Psychological stress and psychiatric aspects of kidney transplantation. The role of a multidisciplinary team for a better therapeutic adherence" by De Pasquale C et al. is according to my opinion, acceptable for publication without any revisions. The topic is interesting and useful for medical professionals involved in the field of organ transplantation. This article is worthwhile for publication.
