## COMMENTS TO AUTHORS

It was demonstrated that conversion from calcineurin inhibitor (CNI) to mTOR inhibitor (mTORi) could improve creatinine concentrations in liver transplant patients (Transplant Proc. 2011 Jul-Aug;43(6):2307-10; Transplant Proc. 2011 Apr;43(3):714-7). In this study, the authors investigated effect of conversion from CNI to mTORi in liver transplant recipients with diabetes mellitus (DM), hypertension (HT) and/or proteinuria. The data are of potential interest but raise several questions. 1. According to authors' description (We identified those patients with diabetes mellitus (n=28 patients), arterial hypertension (n=27 patients) or proteinuria (n=27 patients), and all of these three factors (n=8). ), the number of patients should be 90 (not 86). Why? 2. Numbers containing decimals should be presented with a decimal point (.). Both decimal comma (,) and point are used in this manuscript. Please change. 3. The writing needs editing and polishing, ideally by a native speaker.
