COMMENTS TO AUTHORS

A detailed review helps understandings of the merits and demerits of blood transfusion in LT. This manuscript is well written, but too redundant to go through the whole subject. Some part should be cut to make this article more focused on particular issue.

COMMENTS TO AUTHORS

A very comprehensive review on the issue of blood transfusion during liver transplantation. Several minor issues need to be polished. 1. Figure numbers are not correct. 2. Few minor language polishes. 3. Although the review is comprehensive, the issue can be more focus on some more important areas.
