COMMENTS TO AUTHORS

This is a well written manuscript facing the particular issue of the psychological evaluation of recipients of vascularized composite allografts (hand, face, uterus penis). The manuscript cover all the relevant areas of the topic and is updated.No surprise if the data are poor because as the author himself stresses there is a need of multicenter/international work-up. Two minor comments: please review the writing because there is some misspelling Even is not the topic of the title, but considering their impact on rehabilitation, please give some data over the principal immunosuppressive side effects reported by literature (cancer, diabetes, kidney failure,etc)
