**COMMENTS TO AUTHORS**

The manuscript entitled, “Role of cytomegalovirus on the maturation and function of monocyte derived dendritic cells of liver transplant patients”, by Shariat et al., demonstrated the functional defects of dendritic cells in CMV reactivated liver transplant recipients when compared to those without CMV reactivation or healthy norms demonstrating the differences in cytokine concentrations and expressions. I have some comments. Comments 1. What did author mean by reactivation? Please clarify the pretransplant sero-status of CMV of the recipients. 2. Please clarify the results of pp65 antigenemia. 3. Author should demonstrate the acute cellular rejection of the cohort, since they assumed that he functional defects of dendritic cells in CMV reactivated liver transplant recipients may lead to rejection. 4. Results section is very difficult to follow. Please shorten the descriptions, and make it comprehensive.

### COMMENTS TO AUTHORS

the article about : Role of cytomegalovirus on the maturation and function of monocyte derived dendritic cells of liver transplant patients ihas good information but need clarify the definiton of reactivation, data about antigenemia and clarify acute rejection incidence between the different sample studied

### COMMENTS TO AUTHORS

Two small groups of patients and controls but important results, which may lead to further investigations.
