COMMENTS TO AUTHORS

This is an interesting and clinically relevant review article regarding potential nicotinamide treatment applications in chronic kidney transplant recipients. In particular, the authors reviewed the role of nicotinamide in the prevention of non-melanoma skin cancers and in reduction of serum phosphorus concentrations. In general, the article is well-written and comprehensive, and the information is clinically useful and may change clinical practice in the future.

COMMENTS TO AUTHORS

The authors reviewed recent papers about nicotinamide (NAM) as a possible chemopreventive agent for non-melanoma skin cancers in kidney transplant recipients. In addition, they also reviewed hypophosphatemic effect of NAM. This paper is very well-written and has valuable information regarding recent and on-going studies on this area.

COMMENTS TO AUTHORS

It is an interesting paper that states the benefits of the therapy with nicotinamide in patients with CKTR. In general it is a well written paper although i think some phrases need to be rewritten.
