### COMMENTS TO AUTHORS

The authors of the manuscript have explored something that its importance should be in depth analyzed: adherence and mental health in transplantation. The manuscript should undergo a minor English style revision especially in the introduction section. Methods should be trimmed to describe amore concise description of the evaluations. Demographic data such as age and sex should be in the results section. There is no statistical software described for analysis (unless it was done manually). Discussion is brief, results should be compared to similar studies in transplant population, and individual importance of each evaluation is encouraged. Many thanks for letting me review the manuscript

### COMMENTS TO AUTHORS

The manuscript was also written well. I have minor comments for the authors in the other section. Tables should be improved and the reference style should be in accordance with the journal guideline.

### COMMENTS TO AUTHORS

Nice observational study. I would suggest diagrams instead of tables, especially correlations look better in a diagram form.
