ESPS PEER-REVIEW REPORT

Name of journal: World Journal of Transplantation

ESPS manuscript NO: 28869

Title: Magnetic resonance imaging of the transplanted pediatric heart as a potential predictor of rejection

Reviewer's code: 00741994

Reviewer's country: Netherlands

Science editor: Fang-Fang Ji

Date sent for review: 2016-07-21 14:06

Date reviewed: 2016-08-02 23:03

COMMENTS TO AUTHORS

Specific: 1. Images must illustrate the trends of decreasing EDV's prior to rejection. 2. Change title to "magnetic resonance imaging study of the transplanted pediatric heart as a potential predictor of rejection." 3. Present a plot of the EDV's as a function of age in patients and controls. This should illustrate the role of age as a confounder in the findings of Table 2.

COMMENTS TO AUTHORS

The authors have produced an interesting study evaluating the use of cardiac MRI scanning as a means to diagnose acute cellular rejection in paediatric heart transplant recipients. Although the cohort of patients only contained 5 with ACR if CMR was going to be useful to diagnose ACR then one would expect it to have helped make the diagnosis in the majority of these patients. The authors are correctly conservative in their conclusions suggesting that larger series are needed in this population before ruling out this technique and comment that the techniques will improve over time.
