COMMENTS TO AUTHORS

Dear authors, Thank you for your interesting and well done manuscript. I have found a really good summary of the latest achievement about the GERD disease and its consequences in lung transplanted patients. My only suggestion is to describe which is the antireflux surgery both endoscopic both open surgery. Good job!

COMMENTS TO AUTHORS

The Boston team presents a review on GERD and lung transplant. The manuscript is very comprehensive and interesting. I have only 2 to comments to improve readability and to correct some misplaced data. 1) I would add tables and figures summarizing data since the manuscript is too long. 2) The paragraph on high resolution manometry as diagnostic for GERD must be removed.

COMMENTS TO AUTHORS

The authors propose an extensive literature review on the topic of gastroesophageal reflux in lung transplant. The manuscript is well prepared and I think can be of great interest to clinicians.
