Conflicts-of-Interest: ☐ Yes ☒ No

SPECIFIC COMMENTS TO AUTHORS

However, I have some minor comments: The section of management should be improved. How to manage fluids, edema? When to conduct dialysis?, etc.

SPECIFIC COMMENTS TO AUTHORS

.....supportive in nature with fluids, No! fluid restriction! Decreased complement levels are not predictor of poor outcome. Persistence of hypocomplementemia beyond 12 weeks suggests alternative diagnosis e.g. SLE or MPGN. “However, small percentage of patients with persistent urinary abnormalities, persistent hypertension, and chronic kidney disease after the acute episodes”-incomplete sentence acute episodes - why plural?through immune complex-mediated mechanism causing aggravation of blood vessels in the glomeruli (what do you mean with aggravation?) GAHBS - explain the abbreviation Thiazide diuretics are effective as a first-line medication in APSGN - should be used with caution (hyperkalemia!) The treatment of pulmonary edema was not elaborated at all. Concerning calcium channel blockers it is necessary to mention that short acting nifedipine should not be administered due to serious adverse effects!
