SPECIFIC COMMENTS TO AUTHORS

Thank you for interesting comprehensive topic kindly see my comments as below :

page 4 line 20 , U5MR what is the definition ? when I returned to reference 6, the word other causes may be misunderstood in the manuscript as it is only nephrology but in the reference. 'Other conditions among children aged 1-59 months included causes originated during the perinatal period, cancer, severe malnutrition, and other specified causes. Intrapartum-related events were formerly referred to as "birth asphyxia". ' If possible, the need to use the abbreviation to decrease wording for ESRD, for example, in page 6, lines 6 and 10. Page 7, line 5 For the specialised investigation, it is good to divide it into Diagnostic test, diagnostic imaging, nuclear medicine, endoscopy as clear titles of subcategories . Page 10, there is a need to clarify the abbreviation in the subtitles ex CT for computed tomography. In the specific treatment, there is a need to discuss the role of multidisciplinary pharmacy and their role in the availability of drugs and doses .nutritionist in CKD for restriction of protein and special diet for renal pt Is PD applicable to (6 - 13) years old age?

SPECIFIC COMMENTS TO AUTHORS

The idea of the article is interesting, but the organization and contents are not consistent with the hypothesis and title of this article. Hence there are many concerns should be raised: 1) The title is not suitable to the presented contents. 2) The contents are made to discuss the etiology, diagnosis, and management of the chronic kidney disease in a classic way, but not the health care system or the quality of the services delivered to pediatric patients. 3) It is not clear whether this article targeted a local versus an international health care system of pediatric chronic diseases. at many countries, these mentioned services are provided perfectly for those patients. 4) The organization of the text, including the hierarchical flow of headings, is confusing and not serial. The smooth transfer of the idea between the different parts of the article is not consistent. 5) Writing mishaps: There are many language and writing errors that warrant a comprehensive revision. For example, the excessive use of the symbol (&) is not acceptable, where the suitable link tool should be used (and). Also, the use of the terms chronic kidney disease (CKD) and chronic disease interchangeably is confusing.
