## COMMENTS TO AUTHORS

Vikrant et al. reposted clinico-pathological spectrum of snake bite-induced acute kidney injury (AKI) in India. This study demonstrated the major histology of snake bite-induced AKI and risk factors of patients' death in a large number of patients. This paper is well written, but there are some concerns to be addressed. 1. This is an original study, thus, the authors should highlight what is new in this study and should concentrate the words number in discussion section based on the AKI findings. This reviewer feels that this is rather a review article than an original one. 2. It is necessary to show study permission from ethical committee in their institution.

## COMMENTS TO AUTHORS

The study is interesting and inclusive for the readers of the special field. There is only one comment for the author. For the issue of clinico-pathology, I suggest the author clarify the clinical picture based on the ATN, ATIN or other class of renal pathology.
