VEGFR/KDR. The abstract is truncated (178 words). It could be expanded and structured to be able to stand alone regardless the article. The methods and results could be better wrapped up. The number of figures is too much (n=11) for an original article. They could better be merged. Constructing a table would be useful to present the results presented in text format. . The discussion is lengthy. It should be more focused and shortened. The resolution of figures 1, 2, 5, 8, 9 and 10 could be improved. The references could be slightly reduced in number to fit for an original article.

SPECIFIC COMMENTS TO AUTHORS

Authors are kindly requested to present their data as means plus/minus SD but not SEM, because readers are interested in knowing the dispersion of values and not the precision of the mean, due to the paucity of observations. I haven't read any world about the side

SPECIFIC COMMENTS TO AUTHORS

Comments for ESPS Manuscript NO 38781 This is an interesting topic. The followings are my several major and minor concerns. Major concerns: 1. Too many figures used in this article should be merged. 2. The authors only emphasized the possible effects of
