COMMENTS TO AUTHORS:

Antibiotic resistances are a top priority and MRSA is of growing concern in the clinic, therefore, this study is important. However, the faster and more reliable detection of MRSA using genetic approaches, the lower price of hybridization techniques have all been reported before. What remains is that the authors have shown this for their clinic giving it the character of a case study. The language is a big problem and here corrections by a native speaker is required. I did some of these corrections in the text and I attach this version here.
