COMMENTS TO AUTHORS

This review contains elements of interest, and seems to be well written. This reviewer has only minor corrections for the manuscript. 1. Latin Names of Pathogens: Be consistent to use italic fonts for the names. I would use "Chryseomonas sp" or "Chryseomonas spp" instead of just "Chryseomonas" and the same for others that only have Genus names. 2. Page 4, after title Chlamydia pneumonia: "C. pneumoniae is an intracellular obligatory bacteria which causing upper and lower respiratory tract infection [54]." Correction: "C. pneumoniae is an intracellular obligatory bacteria which causes upper and lower respiratory tract infection [54]." page 5, line 4: "Moreover, immunoglobulin based screening also has significance and capable for the predication of disease occurrence in existing non-symptomatic and close relative population of patients [41]." Correction: Change "capable" to "is capable" or "capability"

COMMENTS TO AUTHORS

The review aims to summarize some aspects regarding the role of specific infectious pathogens in coronary artery disease. As is, the review fails to systematically discuss the topic. It covers only three pathogens, although in the introduction many others are listed. The mechanisms behind the pathogeny of discussed pathogens are also poorly described. There is an abundance of literature, including reviews, which are more thoroughly developed.
