COMMENTS TO AUTHORS

The manuscript NO 16640 "Cross-reactivity between aeroallergens and food allergen" has an important significance of research, is presented very well and is easily readable. The title reflects the content of the study, but the main and short titles are the same, it would be better to distinguish them. The abstract provides a clear delineation and presents the significant points related to the research background and conclusions. Table 1 is not comprehensive nor exhaustive. It would be preferable to add additional tables or figures that summarize the main data and make reading of the manuscript more fluent.

COMMENTS TO AUTHORS

The manuscript is well presented, clearly written and easy to read. I would suggest only minor modifications: 1) Modify the short title 2) I would suggest to have more tables summarizing the presented data, with particular regard to potential clinical applications 3) If possible, more deeply discuss the potential clinical applications (practical advices).

COMMENTS TO AUTHORS

Here are my comments and advices on this manuscript: 1. In the introduction, is class 1,2 food allergy related to other contents? If so, please describe further. Otherwise it seems unnecessary. 2. You should make tables and figures with materials having cross-reactivity. 3. Delete one 'mite' from 'mite mite-shrimp' in abstract. 4. Please, change bold lettering in article to normalize type. 5. Unify the font size of all texts in paper. 6. Please clarify the table 1 easy to understand.

COMMENTS TO AUTHORS

Very well written paper, a lot of clinically significant facts discussed, over a broad number of interactions. A synthetic table of crossreactive allergens would be of use.

COMMENTS TO AUTHORS

In this review article, the authors give an extensive overview for the syndromes and associations related to cross-reactive allergen components, the impact of relevant cross-reactivities between aeroallergens and food allergens, and the molecular-based allergy diagnostic. I do not know any other article summarizing the cross-reactivity between aeroallergens and food allergens. Therefore, I would recommend accepting this article for publication.
