

This manuscript entitled "Neurocutaneous Melanosis with A Cystic-Solid Meningeal Melanoma In An Adult: A Case Report and Literature Review" is very interesting and valuable. However, it is better to insert the word of "intracranial" in the title. For Example, "Neurocutaneous Melanosis with Intracranial Cystic-Solid Melanoma in An Adult: A Case Report and Literature Review"

*Thank you very much for your suggestion. We have already changed the title.*

The manuscript entitled " Neurocutaneous Melanosis with A Cystic-Solid Meningeal Melanoma In An Adult: A Case Report and Literature Review" seems interesting, however, number of changes are required. the title is not specific and as it is also a review article the word "an adult" should be changed. introduction is very brief and requires more specific information,. do the authors prefer MRI or cerebrospinal fluid ? please make it clear and discuss in discussion. in results, case report and other literature may be discussed separately,. No headings in the discussion section are required. please make the conclusion more specific and conclusive. pictorial representation is poor. more reference may be added.

*Thank you very much for your suggestion.*

1. *We have already changed the title.*
2. *We have already added some content in the information.*
3. *We have already added the discussion about why we prefer MRI.*
4. *Case report and other literature have already been discussed separately.*
5. *We have already made the conclusion more specific and conclusive.*
6. *We have already modified some of the pictures.*
7. *We have already added some reference.*
