

Reviewer #1:

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Minor revision

Specific Comments to Authors: In this article, the authors reported a case of proteinuria and high red blood cell counts. This case is very rare. The authors described the case in detail. Based on this case, the authors stated that there may be a causal relationship between minimal change disease and polycythemia vera. Anyway, extensive epidemiological data will be helpful in the future. The manuscript is overall very well written. Some minor editing is required before final acceptance.

Reviewer #2:

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Minor revision

Specific Comments to Authors: This is an interesting case of minimal change disease caused by polycythemia vera. This case is very interesting and well described. The manuscript requires a minor revision. Some minor language polishing should be revised. And there are too many figures, please re-arrange the figure numbers, or reduce the images.

Dear reviewer,

I have deleted some figures which is not so important and re-arrange the figure numbers.
