The Editor in Chief

World Journal of Clinical cases ,

Dear Sir,

**Cover Letter on the revised manuscript : Completion of 6-month Isoniazid Preventive Treatment among eligible under Six Children: a cross-sectional study, Lagos, Nigeria**

We are very grateful for the constructive feedbacks provided by the reviewer. We retained all the tracked changes made by the reviewer now in the table below. We also made corrections to changes suggested by the reviewer while making additional tracked changes on our own to improve the quality of the paper. The cover is to highlight changes made based on the feedbacks as in below table:

	Review 1 comment	How they were fixed	Line and page number where they were fixed
	<i>The title is appropriate. The article contains good information from the region which is helpful for the policy makers. The abstract reflects the study contents. The introduction is satisfactory but repetitions should be avoided. The objectives are clear. Methodology is mostly</i>	Thanks for the positive feedbacks	

	<i>well explained. Results are acceptable.</i>		
	<i>However, majority of all INH losses occurred within the first 2 months of treatment is quite scary. More explanation in this regard is needed in the discussion.</i>	We have now provided more insights and discussion on findings of most LTFU in month 2	Line 285-294
	<i>Please add more information on measures to improve the treatment compliance.</i>	We have now added more information on measures to improve INH treatment compliance	Line 298-300

	<i>Thank you for giving me this opportunity to review this article. The thesis is well written, though I have some serious concerns regarding the article.</i>	Thanks for the commendation of our article	
	<i>Title: It should be self-explanatory and clear.</i>	Thanks for this feedback. We have now revised the title and changed to: <b>Outcomes of 6-month Isoniazid preventive treatment among eligible under Six Children: a cross-sectional study, Lagos, Nigeria</b>	Line 1-3
	<i>Keywords: use mesh</i>	Thank you we have	Line 42-43

	<i>keywords</i>	now changed to the following MESH terms: Isoniazid , Child, Tuberculosis, treatment outcome, latent tuberculosis, administration &dosage	
	<i>Abstract: 1. Mention the study setting. 2. Include the character of the study participants. 3. Include all the study outcome measures. 4. The conclusion should be drawn on the basis of the study reports, not on the assumption.</i>	Thank you very much. We have now added information on setting, participants characteristics, study outcomes and tailored our conclusion to the study findings	Line 24-26 and Line 38-42
	<i>Manuscript 1. The novelty of the study is missing, including more recent references emphasizing the need for this study.</i>	Some language on the novelty of the study has now been included and referenced in the background	Line 85-91
	<i>Manuscript 2. Include the character of the study participants in detail.</i>	More explanations have been added to the study participants	Lines 177-185
	<i>Maniscript 3. Include the reference study for sample size calculation.</i>	The reference study for the sample has now been added	
	<i>4. The results part was not</i>	The result part has been updated with	Line 266-276

	<i>presented in detail with all information.</i>	full details of the tables and figures	
	<i>5. The conclusion should be more concise and self-explanatory and drawn on the basis of study reports.</i>	The conclusion has now been updated, refined and tailored to specific findings of the study	Line 353-372
