

For major revisions 1

they have been describeed in the part of OUTCOME AND FOLLOW-UP.

For the major revisions 2

because the focal nesidioblastosis is rarely reported in adults, so it is difficult to compare this case with other descriptions of nesidioblastosis in adults and we have compare it with insulinoma. For the Minor revision, we have revised according with you Comments .

Thank you again for your valuable comments on my article in your busy schedule.

Yours sincerely,

Gu J, Department of General Surgery, Affiliated Hospital of Zunyi Medical University
