

20 October 2022

Editor in Chief

World Journal of Clinical Cases

Dear Sir,

Thank you for your invitation e-mail regarding submitting manuscript to World Journal of Clinical Cases dated 15th October 2022.

We are pleased and appreciate to have been given the chance to submit our manuscript. According to your recommendation, we submit a manuscript entitled “Drug induced sarcoidosis-like reaction three months after BNT162b2 mRNA Covid-19 Vaccination: A case report and review of literature” as ‘case report’ for publication in World Journal of Clinical Cases.

And thank you very much for your kind and valuable suggestions regarding our manuscript.

We revised the manuscript according to the suggestions and comments of the reviewers in World Journal of Hepatology.

The major points are as follows.

1. We made a figure of timeline of 3 times of mRNA vaccination, and the diagnosis and treatment (clinical course) of HSEG to describe the timeline of the patient.

2. As suggested by the reviewer, DISR was often multiple nodules in general. In fact, mRNA induced DISR described in the Discussion of our manuscript were all nodules. Chopra's criteria regarding DISR, however, does not exclude a single nodule DISR from DISR.

So even though the present case was a single nodule DISR., we believe the present case was compatible with Chopra's criteria.

We described that point in the Discussion.

We believe this report as valuable for hepatologists.

We sincerely hope that it will be accepted by your journal.

Sincerely yours,

Soo Ryang Kim, MD, PhD
