

Reviewer #1: It was better if the authors mentioned HbA1C result of the patient. - With the eroded tendons, what were the specific tendons? and what did you do to improve the tendons? - Some English typo needs to be revised.

1. Thank you very much for your careful reminding. I have added the patient's HbA1C result in the manuscript.
2. the specific tendons were the superficial flexor tendon of middle finger and deep flexor tendon of ring finger of left hand, deep flexor tendon of the ring and little fingers of right hand. I also improved the relevant content in the draft.
3. In order to minimize tendon damage, longitudinal incisions were made to exposed these urate crystals. However, it will inevitably damage some of the bundles that we repaired it with 5-0 ETHICON absorbable suture to improve them and anti-adhesion film to protect it later.
4. I've performed further language polishing by professional embellishment company. And they provided a new language certificate along with the manuscript.

Reviewer #2: please write about the surgery techniques in more details. the discussion should be improved. Did EMG-NCV confirm carpal tunnel syndrome?

5. I have written about the surgery techniques in more details.
6. I have further improved and enriched the discussion .
7. The EMG-NCV result has been added in the manuscript. I also attached the electromyography report sheet.
