

**Response to Reviewer #1:** Thank you for your valuable advice. We have carefully revised the article according to each of your suggestions. **The patient had no history of viral or bacterial infection of the kidney or urinary system**

**Response to Reviewer #2:** Thank you for your suggestion, we have updated the references and add another fifteen references.

**Response to Reviewer #2** What needs to be pointed out is that **the patient had no history of hypertension**; the patient initially sought treatment in other hospitals for repeated vaginal bleeding, and the initial diagnosis was considered as threatened abortion, pregnancy-induced hypertension, and continued high blood pressure and vaginal bleeding after repeated antihypertensive and fetal protection treatment. So the doctor and the patient communicated the condition, the patient asked to terminate the pregnancy. We have to admit that obstetricians in primary hospital misdiagnosed the condition, they should exclude the factors related to secondary hypertension.

As for the language quality, I once again asked the professional English editing company (Editage, [www.editage.cn](http://www.editage.cn)) to help me with the editing after this revision. Finally, I would like to thank all the experts for reviewing the manuscript again and putting forward valuable comments
