

Reviewer Comments**Reviewer #1:**

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Accept (General priority)

Specific Comments to Authors: Harigane et al, authors of the manuscript "Enzyme replacement therapy in two patients with classic Fabry disease from the same family tree: A case report" describe two patients with Fabry disease their clinical manifestations and treatment. The figures show characteristically the disease presentation.

Reviewer #2:

Scientific Quality: Grade B (Very good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Accept (General priority)

Specific Comments to Authors: World Journal of Clinical Cases

Response:

The authors have carefully read the peer-review report and formatted the manuscript. The language and grammar of the manuscript has been polished by an English language editing company. We have provided a new language certificate with the resubmission of our manuscript.

The abbreviations were adjusted to the formatting guidelines. For example, the commonly used abbreviation, ELISA, did not require a definition on its first use, hence this was removed. Abbreviations were removed from the figure and table titles.

We have uploaded the required accompanied documents and made changes to the figures by adding copyright information where relevant.
