

[20230325]

Dear Jin-Lei Wang, Company Editor-in-Chief,

We wish to resubmit the manuscript titled "***The relationship between intralobar pulmonary sequestration and type A aortic dissection: A case report***"

We thank you and the reviewers for your thoughtful suggestions and insights. The manuscript has benefited from these insightful suggestions. I look forward to working with you and the reviewers to move this manuscript closer to publication in the *World Journal of Clinical Cases*.

The manuscript has been rechecked and the necessary changes have been made in accordance with the reviewers' suggestions. The responses have been prepared and attached herewith/given below.

Thank you for your consideration. I look forward to hearing from you.

Sincerely,

Gang-Hua Lin, MD

Comments to the Author: The manuscript is lack of evidence for vasculitis

In our case, biochemistry lab data showed mild elevated CRP level, indicated possible inflammatory status. Computed tomography angiography also revealed mild mural thickening and wall enhancement which may indicate mild vasculitis. The final pathology report of the resected specimens disclosed the diagnosis with extensive necrosis of the lung, hypervascularity and reactive lymphoid hyperplasia.

I've added comprehensive discussion in the revised manuscript for the evidence of vasculitis in our case.
